

Bridge the Gap between Your Data and Generative AI

Generative AI has put the business world on notice. Organizations are searching for ways to integrate this innovative technology into daily processes, however, most lack the infrastructure or ability to truly integrate their content securely into Generative AI.

BA Insight's 95+ Connectors

We are putting organizations on the fast-track to enable Generative AI.

ConnectivityHub for Generative AI.

The unique ability to aggregate and gather your data with BA Insight's Connectors makes our solution the best place to leverage accelerating and advancing AI technology.

With over 95+ Connectors, BA Insight is the one-stop shop to best utilize Generative AI tools. We provide a centralized space to find your content and best harness the power of Generative AI with the ability to integrate to the most popular repositories.

Future-proof your organization.

With functionality that seamlessly connects with the most popular applications that organizations store and pull content from, BA Insight enables organizations to integrate with Generative AI.

Our commitment to innovation and advancement ensures that our current integration into Generative AI tools remains a priority of our technological improvements.

As our current AI ecosystem evolves, the BA Insight team is continuously updating our platform and Connectors to ensure compatibility with other emerging AI tools.

Why is BA Insight the best option for Generative AI integration?

95+ Connectors

We provide extensive support for integrating diverse data/content sources. BA Insight provides a secure integration between the most popular applications like NetDocs, Salesforce, Confluence, SharePoint, and more.

Centralization

Our platform acts as the central hub of communication between Generative AI and your data. Enabling organizations to streamline the deployment process with Generative AI tools and connect their critical information to the relevant users in a personalized delivery.

Enhanced Security

BA Insight adheres to the strictest standard of data protection for our customers. We understand how critical maintaining privacy and security for your organization's data is, which is why we provide robust security measures across all Upland Software products. We ensure that your sensitive data remains confidential and is safeguarded through the Generative AI integration.

Performance and Scalability

BA Insight is built to handle large-scale volumes of data efficiently, no matter the size of the organization. We ensure our customers can scale enough for Generative AI without compromising our industry-leading performance.

Intuitive Integration

We seamlessly integrate Generative AI into your organization's workflows. We are fueling the fire for innovation and productivity and making it easy through conversational-like search experiences to extract insights in your day-to-day operations with Generative AI.

By maximizing the use of our 95+ connectors, organizations can bridge the gap between their repositories and the value of Generative AI.

Protecting AI investments across the enterprise

Upland BA Insight's AI Enablement Platform allows enterprises to access, prepare, and deliver the knowledge needed to power AI projects. BA Insight is AI-agnostic; using vector search, data chunking, ML, NLP, and security trimming to index, enrich, and display knowledge from all connected sources to supercharge enterprise AI.
