BA Insight

AutoClassifier

Eliminate bad answers and hallucinations in your AI project with enriched knowledge.

The success of any AI project depends on the quality of the knowledge it consumes. Poor data quality is the top reason AI projects fail, but BA Insight's powerful AutoClassifier eliminates that risk.

When integrating and extending AI into native repositories such as Confluence, Salesforce, Jira, iManage, NetDocuments, or Google Drive, your content must be organized, enriched, and easily consumable. AutoClassifier ensures your knowledge is structured for optimal AI performance, maximizing productivity.

What is AutoClassifier?

BA Insight's AutoClassifier modernizes knowledge enrichment, eliminating bad AI answers and making data more findable. By enhancing your content, it drives better results with Generative AI solutions like Copilot, Bedrock, and more, boosting productivity dramatically across your business.

AutoClassifier amplifies search results, delivering more relevant insights and better AI-driven outcomes. By structuring and enriching your data, it prevents AI project failures before they begin while boosting productivity across your organization.

The Benefits of Enriching your Knowledge with AutoClassifier

- Better AI outcomes that improve productivity and organizational efficiencies

- Elimination of hallucinations and bad answer generation

- Improved retrieval and indexing processes, so your information is findable to leverage for AI

- Enhanced overall chunking process for your organization, smaller chunked bits of information allow AI to understand the knowledge better

Protecting AI investments across the enterprise

Upland BA Insight's AI enablement platform allows enterprises to access, prepare, and expose the knowledge needed to power AI projects. BA Insight is AI agnostic; using vector search, data chunking, ML, NLP, and security trimming to index, enrich, and display knowledge from all connected sources to supercharge enterprise AI.
