

## Project Portfolio Management

# Simple, Powerful Project and Portfolio Management Software for Today's Workplace

Eclipse Project Portfolio Management software delivers a robust, cloud-based Project Portfolio Management solution that enables organizations to succeed and derive value quickly and efficiently.

Eclipse PPM focuses on three key areas: Portfolio Management, Project Management, and Resource Management. The solution focuses on improving project prioritization and execution, while improving communication and collaboration amongst stakeholders, project managers and resources. It also helps solve the challenge of delivering projects and operational services with constrained human resources.

Eclipse PPM has been successfully implemented in hundreds of organizations using the 'keep it simple' implementation approach. Eclipse PPM Implementation Consultants work with each organization to understand the process maturity level and develop an implementation plan that introduces change incrementally. As the Eclipse PPM adoption expands and the processes begin to improve and mature, Eclipse PPM can be rolled out to more and more users in the organization.

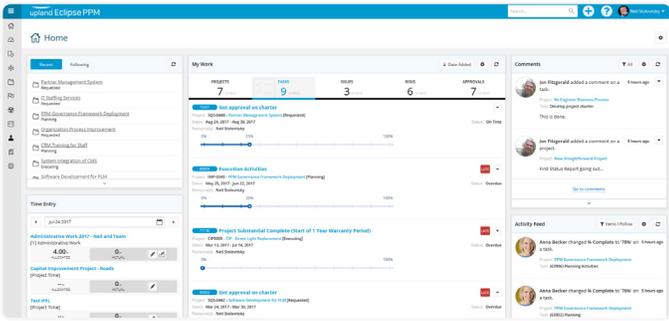

## Benefits

- **Simple to implement, use and support:** Eclipse PPM was created with the end user in mind. Management, Project Managers, and Resources can access Eclipse quickly and easily. Organizations achieve success through easy adoption, making Eclipse PPM a part of everyday processes.
- **Leading edge technology:** Eclipse PPM is an easy-to-use Rich Internet Application (RIA). The RIA interface allows users to customize dashboards with the ease of drag-and-drop technology, and edit project financials, schedule information, and time tracking as if they were working in a spreadsheet.
- **Low total cost of ownership:** Eclipse PPM is hosted in a highly secure data center. Enterprise-level security, combined with streamlined implementation process and scalable licensing fees, results in low total cost of ownership for organizations of all types and sizes.

*"Eclipse PPM has allowed us to centralize the management of our IT portfolio, and given us a way to standardize how we execute projects. It has provided a view into resource allocation, which has helped tremendously to balance resources across the organization. We look forward to rolling out additional features in 2016, and are excited about the possibilities."*

— Barinder Khurana, Director of PMO & VMO, ProSight Speciality Management Company, Inc.

### Eclipse Home

One-stop landing page enables users to interact with time-relevant work items without digging through the application.

- Review and take action on your time-relevant work items from the “My Work” panel
- Improve time-entry compliance by using the daily “Time Entry” panel
- Collaborate with other users via the “Comments” panel
- Get updates on activity using the “Activity Feed” panel

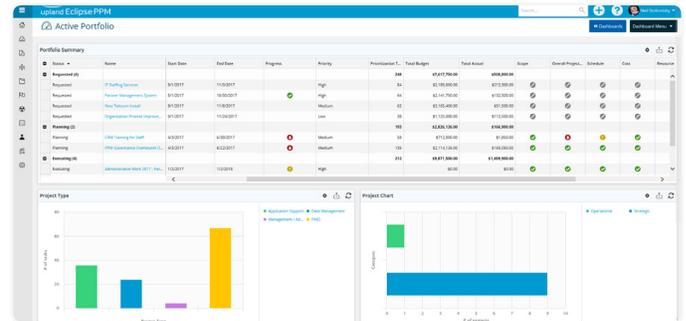

### Timesheets

Track and approve resource time at a granular level across projects and tasks.

- Users can build a timesheet based on their scheduled work, and by adding other items on demand
- Approvals can be configured per project or resource depending on your organizational requirements
- Help management understand the time-entries by adding notes at the daily or weekly level

### About Upland Software

Upland Software (NASDAQ: UPLD) is a leading provider of cloud-based Enterprise Work Management software. Our family of applications enables users to manage their projects, professional workforce and IT investments; automate document-intensive business processes; and effectively engage with their customers, prospects and community via the web and mobile technologies. With more than 2,500 customers and over 250,000 users around the world, Upland Software solutions help customers run their operations smoothly, adapt to change quickly, and achieve better results every day.

### Dashboards

Track and investigate your entire portfolio from one place with our powerful and performant dashboards.

- Highly configurable layouts and data panels
- Advanced charting with drill-down functionality for deeper investigation
- Tabular data can be grouped, sorted, and aggregated to meet your organizational reporting needs

### Resource Planning and Management

Effectively plan, allocate, and monitor resource demand and utilization across the entire project portfolio.

- Build high-level resource plans using generic or actual resources, and perform “what-if” analysis before a detailed work plan is defined
- Review, manage, and report on work plan allocations across the entire portfolio
- Pivot data by project or resource to analyze from a project manager or resource manager perspective
