U FileBound

Turn data into business insights with real-time analytics

FileBound Analytics empowers business leaders to exploit the full value of the data in their FileBound system to make better business decisions.

FileBound | Analytics

Reports

Analytics made simple.

Uncover meaningful, timely, and actionable business insights into all work processes.

- Create performance comparisons in seconds and modify on the fly using simple drop-down tools

- Get in the zone with a user-friendly interface that makes it easy to review and understand processes

- Inform business leaders of current trends or events that could affect future productivity

Improve future outcomes.

Review the past to plan ahead without requiring IT expertise to get to insights.
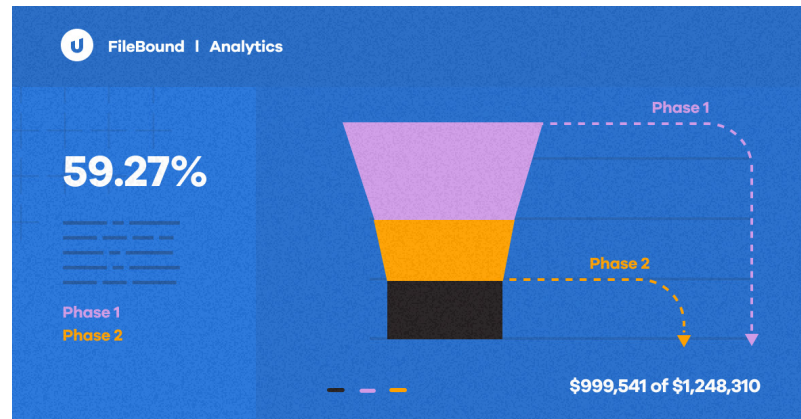

- Predict future performance and establish benchmarks based on historical data

- Review how many items are in various stages of a workflow as well as how soon those items will be processed and how it will affect the business

- Identify and mitigate bottlenecks using escalations or alternative workflows and electronic invoices

Without an understanding of what the data means or where there are opportunities to improve processes, an organization won't realize the complete value of a solution it has invested in.

Features

- Individualized dashboards can be created quickly to provide management at any level with the data that is most important to them

- Predictive capability improves over time because it's based on historical data in the system

- Requires no special training or database skills

- Simple drop-down options let users change parameters on the fly

FileBound Analytics is included in the FileBound Enterprise Edition.

Benefits

- Empowers business leaders to track strategic progress as well as tactical tasks

- Improves business decision making with insight that is important to the C-suite to meet enterprise goals

- Predicts future performance using historical benchmarks to support timely, informed decision making

- Establishes real-time benchmarks that can be used to create realistic service level agreements (SLAs), document compliance with SLAs, and identify areas for improvement

- Provides an overview of the complete demographics and trends of the content contained in stored documents

- Informs business leaders of current trends or events that could affect future productivity or competitiveness so steps can be taken to future-proof operations
