# AI-enhanced cloud capture software

Harness the full value of robust document capture and workflow without the weight or complexities of an on-premise, server-based solution.

Capture content from any device.

Capture and send content from any any scanner, MFP, or mobile device. Just capture and send. Yep, it's *that* easy.

Automatic image preprocessing ensures professional images with AI-enhanced quality controls that detecting boundaries, cropping, and correcting perspective.

AI machine learning enhances cloud capture by determining document types and identifying related processes, so you don't have to.

Supercharge your digital workflows.

Create infinite custom workflows and easily track and analyze captured documents and data with centralized dashboards.

Improve efficiency by harnessing AI to automatically classify structured, semi-structured, or unstructured documents before sending to workflows or recipients.

Optical character recognition (OCR) converts, compresses, and extracts data to deliver downstream to any application.

Variety of processing capabilites

Upland Intelligent Capture provides comprehensive capture technology that fits the universal needs of a document-intensive organization, while allowing the flexibility to tailor the solution to unique needs based on size or industry. The rules-based architecture built into the foundation of our product allows images, documents, and data alike to be automatically extracted and transformed mid-transit. Point-based transformation using functions such as OCR, conversion, compression, and even more complex functions such as forms extraction can be automated to simplify processes and unburden staff, so they can focus on more high-value work.

Powerful, intuitive workflow

Configuring workflows is now an easy task using our drag-and-drop visual designers to simplify the workflow design process. No code required — our product features an intuitive, user-friendly interface that lays out the workflow inside a visual workflow designer, eliminating those daunting script-based workflow tools.

Dashboard-based reporting

Administrative utility and a user-friendly dashboard experience is key to the adoption and successful day-to-day function of any business product. With Upland Intelligent Capture, you have the ability for a top-level look at the big picture. Customizable dashboards and access to key analytic metrics promote transparency, uncover bottlenecks, and highlight inefficiencies so you can improve processes.

Now users can easily focus on and pull reports based on KPIs and other indicators such as:

- Unread, pending, or expiring files
- Number of documents per workflow or stage
- So much more!

"Upland's cloud solutions have allowed our customers to refocus their technology efforts toward enhancing the business workflow process by alleviating the everyday tasks of on-premise server maintainance and administration."

Rachel Weseman
