

Education Services: Advanced Content Management

An accurate, reliable Qvidian content library is critical to success. In this course, experienced Qvidian content managers and admins will master advanced content management features and learn to create a content management workflow that supports sustained library upkeep.

Proven Course Outcomes

After completing this course, participants will be able to:

- **Use** advanced content management features, such as content review jobs, custom metadata, and library reference codes
- **Create** a successful content management workflow
- **Analyze** their library for improvement opportunities

Offered in Two Flexible Course Formats

Learners can complete this course independently online at their own pace over 4 weeks, with Qvidian instructors available to review progress, provide feedback on activities, and answer questions via email and discussion boards. Alternatively, learners can join three, 3-hour virtual instructor-led training sessions along with other Qvidian customers. Both formats include a companion workbook and hands-on activities completed in a safe Qvidian sandbox environment.

About Qvidian University

Qvidian University is ideal for teaching new team members skills and best practices as well as helping current teams refresh skills and master new concepts. Courses enroll regularly at uplandsoftware.com/qvidian/university

**Your Passport
to Becoming a
Qvidian Content
Management Expert**
